

## Short throw projection disclaimer

Using a *short throw projector* on a *electric or manual* type screen will result in image distortion as the slightest wave on the viewing surface will become more evident.

For *short throw projectors*, Elite Screens recommends the use of a **fixed frame** projection screen.

Examples of undoctored projection images using a *standard throw* and *short-throw* projector

*Standard throw* projected image shown here:

This *short throw* projected image shows how waves on the surface become more pronounced:
